ClaferMoo Visualizer: User Stories

As a product line engineer:

1. How do I view all N optimal product configurations?

2. How do I see differences among all N products?

3. How do I choose only K products out of N cutting off the products with less significant, by my opinion, features?

4. How do I see the correlation between two metrics (e.g. energy significantly influences performance)?

5. How can I group together the products with similar features?

ClaferMoo Visualizer: Future Work

- Consider more use cases

- Evaluate user experience

- More visualization techniques

- Explore clustering
